Appln. No. 10/027,700 (Attorney Docket No. 47612/LTR/G319)

ARGUMENT FOR PATENTABILITY OF
REJECTED CLAIMS

All the pending claims, namely, claims 9 to 13, were rejected in the Office action mailed April 8, 2005. These claims have been twice rejected.

It is submitted that the issues on this appeal are straightforward and the Examiner's final rejection is clear error that would be reversed on appeal. Accordingly, the pending claims should be allowed now to save the time and expense of an appeal.

Independent claim 9 and dependent claims 10 to 13 stand rejected as anticipated by Uemura et al patent 5,720,026 under 35 USC 102(e). But Uemura et al does not disclose storing a copy of the updated file and storing the differences in such copy each time one of files is updated. (See attached claim 9 with highlighting.)

The conventional timing for file backup is at regular intervals independent of when the files are updated. In contrast, all the claims require that backup be executed each time a file is updated. In other words, backup is performed in real time.

In paragraph 5 of the outstanding Office action, the examiner relies upon two passages in Uemura for his rejection under 35 USC 102(e). Nothing in Uemura including the two passages the examiner relies upon states that backup occurs each time a file is updated. Further, Uemura's statements, although possibly ambiguous, are completely consistent with a timed backup at regular intervals.

Appln. No. 10/027,700 (Attorney Docket No. 47612/LTR/G319)

The examiner seems to be arguing that Uemura's teaching of incremental backup anticipates the rejected claims. But, applicant is not relying upon incremental backup for patentability so the examiner's argument is immaterial.

From the forgoing, it is clear that the rejected claims are not anticipated by Uemura under 35 USC 102(e). Accordingly, withdrawal of this rejection and allowance of all the claims are requested.

Respectfully submitted,
CHRISTIE, PARKER & HALE, LLP

data located on a plurality of physical storage volumes,
comprising the steps:

identifying the physical storage locations of a particular
logical file of electronic data stored on a plurality of
physical storage volumes;

communicating said electronic data storage locations to a
computer operating system;

accessing said electronic data physically located on a
plurality of storage volumes by said operating system as if the
data appeared on a single volume.

9. (Previously Presented) A method for backing up data
stored in files as the data is updated, the method comprising:

updating one of the files;

temporarily storing a copy of the updated file (mirroring);

comparing the copy of the updated file with the file prior
to updating;

storing the differences in the copy of the updated file
(versioning); and

repeating the foregoing steps each time one of the files is
updated.

10. (Previously Presented) The method of claim 9,
additionally comprising restoring one of the files to a previous
condition by:

temporarily storing a copy of the current version of the
file being restored;
